

PIMS Executive Director Prof. Dr. Tanwir Khaliq Announces Major Institutional Reforms, Infrastructure Modernization, and Academic Expansions

ISLAMABAD — The Pakistan Institute of Medical Sciences (PIMS) has initiated a series of comprehensive institutional reforms aimed at elevating patient care standards, modernizing electromedical infrastructure, and expanding post-graduate clinical training programs.

Announcing these measures, Executive Director **Prof. Dr. Tanwir Khaliq** affirmed the hospital administration's commitment to eliminating operational bottlenecks and instituting merit-based frameworks across all academic and clinical divisions.

Optimization of Clinical Logistics and Procurement

Under the direction of Executive Director Prof. Dr. Tanwir Khaliq, administrative protocols governing the procurement of pharmaceuticals and essential medical equipment have been streamlined. Pending administrative files have been processed to ensure an uninterrupted supply of medicines across both inpatient wards and outpatient departments (OPD). Furthermore, surgical suites are being fully resourced with essential equipment, specialized surgical sutures, and consumables to maintain continuous operative workflows.

According to Prof. Dr. Tanwir Khaliq, patient welfare remains the foundational objective of the institution's mandate. The administration has completed necessary procedural reviews to guarantee that no clinical unit experiences a shortage of essential pharmaceutical or surgical supplies, thereby maintaining consistent operational readiness.

Infrastructure Upgradation and Academic Expansions

With backing from the Ministry of National Health Services, Regulations and Coordination, PIMS is systematically upgrading obsolete electromedical equipment across core clinical departments, including General Surgery, Internal Medicine, Gastroenterology, and Pulmonology. Tender documentation for facility safety and technical enhancements has progressed to official technical and financial evaluation stages. Key developmental initiatives include:

- **Specialized Surgical Subspecialties:** Introduction of specialized Master's degree programs in Breast Surgery, Colorectal Surgery, Hepatobiliary Surgery, and Minimal Access Surgery under the Department of General Surgery, affiliated with Shaheed Zulfiqar Ali Bhutto Medical University (SZABMU).
- **Thoracic Surgery & Emergency Services:** Establishment of a dedicated Department of Thoracic Surgery equipped with dedicated operating facilities, along with structured planning for an independent Emergency Medicine Department.
- **Maternal and Child Health (MCH) Center:** Initiation of structural rehabilitation and expansion of the MCH Center to increase overall bed capacity and dedicated operating suites.

- **Clinical Subspecialty Proposals:** Formulation of departmental plans to introduce specialized services in Lifestyle Medicine, Endocrinology, Spine Surgery, Pediatric Cardiology, and Pediatric Orthopedic Surgery.

Implementation of Merit-Based Induction and Human Resource Development

To strengthen operational management and clinical care quality, 30 nursing professionals recently completed an international certification in nursing leadership, patient safety, and clinical management. In addition, the administration is institutionalizing the Federal Central Induction Policy. Overseen by a specialized academic committee, this framework ensures that the selection of post-graduate trainees, house officers, and nursing personnel is conducted strictly on a transparent, merit-first basis.

Prof. Dr. Tanwir Khaliq emphasized that the sustainable elevation of clinical standards relies upon structured coordination among all administrative and healthcare stakeholders. Through targeted infrastructure upgrades, specialized medical education, and standardized induction policies, PIMS continues to reinforce its standing as a leading national tertiary care institution.
